

# RAUF MURITALA

## Data Engineer | Cloud Data Platforms (AWS, Azure)

☎ (+234) 9065673167   ✉ raufmuritala@gmail.com   🌐 raufmuritala   📍 Lagos, Nigeria

🔗 <https://raufmuritala.github.io/>   🐙 <https://github.com/raufmuritala>

### PROFESSIONAL SUMMARY

Data Engineer with 2+ years of experience building scalable data platforms and analytics systems that support product, finance, and operational decision-making.

Experienced in designing SQL-based data models, developing cloud-native data pipelines, and delivering reliable, analytics-ready datasets. Hands-on with AWS (S3, Glue, Lambda, Athena), dbt, Airflow, and exposure to Azure and Databricks environments.

Strong track record of partnering with cross-functional teams to define KPIs, improve data quality, and enable data-driven product development. Particularly interested in building robust data infrastructure that supports experimentation, growth, and financial systems at scale.

### PROFESSIONAL EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                          |

EDUCATION

**Bachelor of Science, Biochemistry**, *Lagos State University*.  
First Class Honours (CGPA: 4.76/5.00)

01/2018 – 07/2022  
Lagos, Nigeria

PROJECTS

- AWS Serverless ETL Pipeline for JSON Data**, *Python, AWS*
  - Designed a serverless data pipeline using S3, Lambda, and Glue for ingesting and transforming raw JSON data.
  - Implemented transformation logic in Python and enabled schema inference with Glue Crawlers.
  - Delivered analytics-ready datasets queried via Athena.
  - Read more [↗](#)
- AWS YouTube Analytics Pipeline**, *Python, PySpark, AWS*
  - Built a serverless ETL workflow ingesting and transforming YouTube API data into analytics-ready tables.
  - Used PySpark in AWS Glue for large-scale transformations and Athena for SQL analysis.
  - Delivered insights via QuickSight dashboards showcasing engagement and channel performance.
  - Read more [↗](#)
- Health Data Integration Engine**, *Python, Pandas*
  - Created a robust data integration script to merge multiple health- and supplement-related datasets.
  - Standardized units, handled missing values, and engineered clean tables for downstream analysis.
  - Supported insights on supplement effectiveness and user wellness trends.
